

5.0 HAZARD IDENTIFICATION AND COMMUNICATION

The purpose of this notice is to inform you that EAFab Corporation is complying with the OSHA HAZARD COMMUNICATION STANDARD, TITLE 29 CODE OF FEDERAL REGULATIONS 1910.1200, by using SDS's, by compiling a Hazards Chemicals List, by insuring that containers are labeled, and by providing each employee with training.

This program applies to all work operations in EAFab Corporation where the employee may be exposed to hazardous substances under normal working conditions or during emergency situations.

The shop foreman will act as program coordinator, acting as the representative of EAFab Corporation, who has overall responsibility for the program.

Under this program, each employee will be informed of the contents of the Hazard Communication Standard, the hazardous properties of chemicals which they will use, safe handling procedures, and measures to be taken to protect themselves from these chemicals. Employees will also be informed of the hazards associated with chemicals in unlabeled pipes.

List of Hazardous Chemicals and Safety Data Sheets (SDS's)

EAFab will maintain a complete List of chemicals and their correspondent SDS through an online service that can be reached at <http://www.msdsonline.com/>

The service was contracted in order to certify that, as new chemicals are acquired at EAFab Corporation, their information is maintained and updated automatically so, in the event the SDS is required, anybody using the service can be sure the SDS they are printing is the latest version from the manufacturer.

Shop foreman, will maintain this electronic binder with a list of all hazardous chemicals and related work practices used in EAFab Corporation and will update the list as necessary.

Any new hazardous chemical(s) received by EAFab Corporation will be required to have an SDS document available for inspection before any employee uses the chemical, Paul Shoaff will include the chemical in the electronic binder at SDS Online service.

All SDS' will be a fully completed OSHA Form 174 or equivalent.

Employees must report immediately any unknown and/or unlabeled chemical to his/her immediate supervisor.

Employees are free to request any SDS for chemicals used in EAFab Corporation premises at any time during working hours to Paul Shoaff using Form 5.0.1 Safety Suggestion Form or their immediate supervisor.

Labels and Other Forms of Warning

Shop foreman will insure that all hazardous chemicals in the work place are properly labeled and updated as necessary. Labels should list at least the chemical's identity, appropriate hazard warnings, and the name, and address of the manufacturer, importer, or other responsible party. Labels are required on portable containers.

Non-Routine Tasks

When employees are required to perform hazardous, non-routine tasks (e.g., cleaning tanks, entering confined spaces, etc.), a special training session will be conducted to inform everyone involved in this task of any hazards that could be found and the precautions needed to reduce and avoid unnecessary exposures.

Training

SAFETY AND HEALTH PROGRAM

Everyone who works with or is potentially exposed to hazardous chemicals will receive initial training on the Hazardous Communication Standard and the safe use of those hazardous chemicals by Paul Shoaff. Whenever a new chemical or hazard is introduced, additional training will be conducted to address the new hazard and protective measures to be taken if deemed necessary.

The training plan will emphasize these components:

1. Summary of the standard and this written program.
2. Chemical and physical properties of hazardous materials (e.g., flash point, reactivity, etc.) and methods that can be used to detect the presence or release of chemicals (including chemicals in unlabeled pipes).
3. Physical hazards of chemicals (e.g., potential for fire, explosion, etc.), health hazards, including signs and symptoms of exposure, associated with exposure to chemicals and any medical condition known to be aggravated by exposure to the chemical.
4. Procedures to protect against hazards (e.g. Personal protective equipment required with its proper use and maintenance, work practices, methods to assure the proper use and handling techniques, and procedures for emergency response).
5. Work procedures to follow to assure protection when cleaning hazardous chemical spills and leaks. Where SDS's are located, how to read and interpret information on both labels and SDS's and how employees may obtain additional hazard information.

Contractor Employees

Shop foreman will advise outside contractors in person of any chemical hazards that may be encountered in the normal course of their work on EAFab Corporation premises, the labeling system in use, the protective measures to be taken, and the safe handling procedures to be used.

Each contractor that brings chemicals onto EAFab Corporation premises must provide EAFab Corporation with the appropriate hazard information on these substances, including the labels used and the precautionary measures to be taken in working with these chemicals. Paul Shoaff will include all the chemicals brought by third parties in the EAFab Corporation electronic binder to certify that the latest SDS are available.

No EAFab Corporation worker is authorized to start working with any third party chemical without the proper training on the handling and use of the chemical, a printed copy of an SDS of the chemical and the specific clearance from Paul Shoaff as to the validity and version of the SDS in question. Assuming that any SDS provided by contractors or third parties is up to date and the latest version is not acceptable when we have a service that certifies the authenticity of each SDS by just a couple of clicks.

Contractors must establish procedures to identify existing and potential workplace hazards and assess the risk of associated workers injury and illness. The program must identify processes are in place to identify potential hazards by the use of JSA's, JHA's, facility wide or area specific analysis/inspections.

Identification of Workplace Hazards

Employees and/or sub-contractors will identify the risk/hazards at the workplace, for routine and non-routine activities as well as new processes, changes in operation, products or services as applicable. these will be reviewed with all employees concerned. Hazards will be classified/prioritized based on the risk associated with the task. These risk/hazards will be addressed and mitigated by dedicated assignment, appropriate documentation of completion, and implemented controls.

Employees will be trained in the hazard identification process including the use and care of proper PPE.

Periodic, scheduled inspections will occur as a routine part of EAFab Corporation business.

SAFETY AND HEALTH PROGRAM

Employees who wish to remain anonymous may report unsafe conditions or hazards by submitting Form 5.0.2 Safety Suggestion Form to our Safety Manager, or their immediate supervisor, without identifying themselves. Employees must report immediately any unsafe condition or unsafe practice. No employee will be disciplined or discharged for reporting any workplace hazard or unsafe condition. Failure to report any obvious unsafe situation may result in disciplinary action, up to and including termination.

Contractors must establish procedures to identify existing and potential workplace hazards and assess the risk of associated workers injury and illness. The program must identify processes are in place to identify potential hazards by the use of JSA's, JHA's, facility wide or area specific analysis/inspections.
